

Creating safe, harmonious local environments through dynamic, tailored and sustainable road lighting solutions.

Invest to Save Programme

Recognising the impact brighter and well maintained lighting has on local communities; our Specialist Electrical team is dedicated to the provision of design, installation and maintenance of street and car park lighting. Our services are designed around the requirements of local authority contracts and private lighting schemes.

Contract Details

Colas has designed, supplied and installed lighting in the external environment for over 20 years. We are committed to the delivery of external lighting solutions and the provision of safer and harmonious designed local streets.

We can offer you a complete concept design, project management and installation package or work with your designers to produce optimum solutions – the choice is yours. Our experts can help you with energy efficiency to help you to reduce your running costs. Being independent from lantern manufacturers allows us the total freedom to recommend the best product for your needs. Waste materials

Whatever we do, we always pay close attention to both the safety of the public and of our own people.

1000 new 140w Cosmopolis main road lanterns were installed for East Sussex County Council over a four month period, for their 'Invest to Save' programme. The project scope was to replace existing 250w lanterns in favour of an energy saving alternative. The new lanterns also feature state of the art dimming technology offering power savings by around 50% between the hours of midnight and 6am. The dimming process takes place steadily over a ten minute period and is not noticeable to the human eye. The use of the 'Selenium' lanterns will generate an annual saving of up to £60,000 in energy bills and a 250 tonne reduction of carbon dioxide being released into the atmosphere.
