

Creating safe, harmonious local environments through dynamic, tailored and sustainable road lighting solutions.

Brighton and Hove's City heritage sites

Recognising the impact brighter and well maintained lighting has on local communities; our Specialist Electrical team is dedicated to the provision of design, installation and maintenance of street and car park lighting. Our services are designed around the requirements of local authority contracts and private lighting schemes.

Contract Details

Colas has designed, supplied and installed lighting in the external environment for over 20 years. We are committed to the delivery of external lighting solutions and the provision of safer and harmonious designed local streets.

We can offer you a complete concept design, project management and installation package or work with your designers to produce optimum solutions – the choice is yours. Our experts can help you with energy efficiency to help you to reduce your running costs. Being independent from lantern manufacturers allows us the total freedom to recommend the best product for your needs. A wide range of materials

Whatever we do, we always pay close attention to both the safety of the public and of our own people.

Brighton and Hove City Council commissioned several LED (Light Emitting Diodes) projects in the area in order to refurbish and recreate an illuminated and attractive atmosphere. The teams designed and installed functional and decorative LED lighting systems for several listed structures and public areas, including; Historic Colonnade in Madeira Drive, Hove Park, Trafalgar Street and arches beneath a central viaduct.

These historic locations required discrete yet tasteful lighting to accentuate Victorian features, structures and traditional brickwork. Another objective was to create a safer night time environment as previously these areas were unused during the hours of darkness.
